

Smoothly blending monotone slices

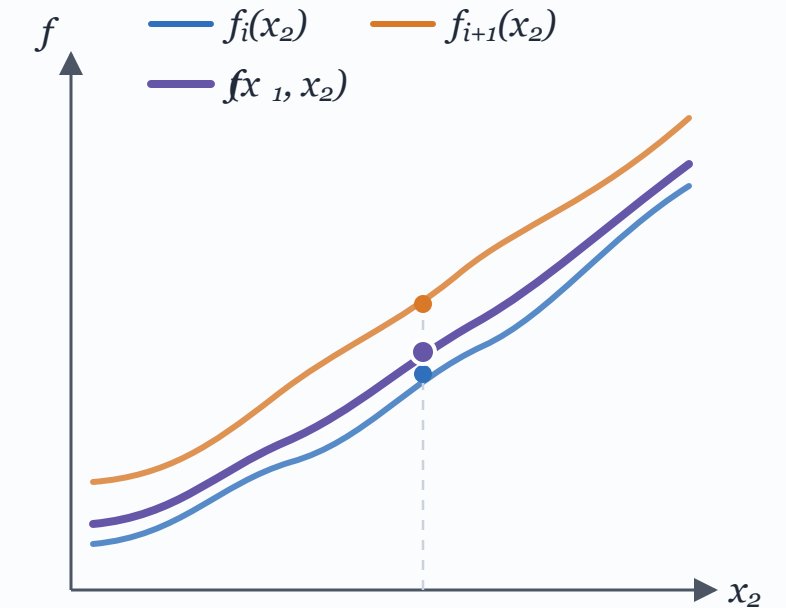

(a) Generate monotone slices

(b) Locate x_1 and compute its weight

(c) Blend the neighboring slices

$$f_{x_1, x_2} = [1 - w(t)]f_i(x_2) + w(t)f_{i+1}(x_2)$$

$$w(0) = 0, w(1) = 1$$

$$w'(0) = w'(1) = w''(0) = w''(1) = 0$$

Adjacent intervals meet C^2 -smoothly in x_1 .
The convex blend remains increasing in x_2 .
